Schedule (ii)

ADDITIONAL SPECIFICATIONS AND INCIDENTAL WORK

1. The contractor shall grind a joint (3/4" deep by 48 inches by the width of the road) at the start and stop of each project and intersecting roads.
 - 1) Grinding around manhole and catch basin cover may be required.
2. The contractor shall sweep clean all paved roads prior the application of the tack coat. **The contractor shall also ensure that the shim course or base course does not** have any debris on it prior to placing the surface course.
3. The construction of hot asphalt mix shall be carried out only when the surface upon which the material is to be placed is dry, and when the atmospheric temperature is above 50 degrees and has not been below 35 degrees Fahrenheit for the preceding 24-hour period. There should be no precipitation during the installation of any of the paving materials.
4. **At all driveway and road entrances, gravel and paved, the paving contractor shall extend the paving width to create a paved apron at least 18 inches wide but no wider than 24 inches. The apron shall be tapered to create a smooth travel surface. Wider aprons may be approved by the town if site conditions dictate.**
5. Handwork – The Town of Camden may require a minimal amount of handwork at various locations (primarily driveways & catch basins). Additional handwork may be required at other locations.
6. Materials testing may be required by the town under a separate contract.
7. The cross slope of the finished pavement surface shall be as close to 1/4" per foot of lane width as possible except in super elevated sections or unless otherwise stated.
8. All mixing, spreading, finishing, and compacting shall meet the appropriate sections of the MDOT Supplemental Specifications as will all equipment necessary to mix, haul, place and compact the paving materials.
9. **All asphalt mix shall be pure virgin asphalt; no recycled asphalt pavement (RAP) will be accepted.**
10. **All paving shall be during the months from May 1 to October 1.**
